## 1.0 DESCRIPTION AND FEATURES

### 1.1 Overview

The SiliconDrive III 1.8-inch Micro SATA Drive is an optimal time-to-market replacement for hard drives and flash cards in host systems that require low power and scalable storage solutions.

Numerous Western Digital patented and patent-pending application-specific technologies can be integrated into SiliconDrive III to safeguard application data and software IP. Application notes detailing these performance-enhancing options are available under NDA.

SiliconDrive III technology is engineered exclusively for the high performance, high reliability and multi-year product lifecycle requirements of the embedded and communications market. Typical end-market applications include broadband data and voice networks, military systems, flight system avionics, medical equipment, industrial control systems, video surveillance, storage networking, VoIP, wireless infrastructure, and interactive kiosks.

Every SiliconDrive III is integrated with Western Digital's patented PowerArmor and patent-pending SiSMART technologies to virtually eliminate storage system failures.

PowerArmor prevents data corruption and loss from power disturbances by integrating patented technology into every SiliconDrive III.

SiSMART acts as an early warning system to eliminate unscheduled downtime by constantly monitoring and reporting the exact amount of remaining storage system useful life.

SSD-F0015S(C/I)-5000	15 GB	2.9 Years	@	1434.4 GB

\* There are unlimited read cycles. Service life is determined using WD's LifeEST calculation at 100% duty cycle with 25% write cycles.

LifeEST is a comprehensive measurement that considers numerous factors to determine the projected life span of a SiliconDrive. A white paper that describes the benefits of LifeEST and how to calculate it can be found at [http://www.wdc.com/WDProducts/SSD/whitepapers/en/NAND\\_Evolution\\_0812.pdf](http://www.wdc.com/WDProducts/SSD/whitepapers/en/NAND_Evolution_0812.pdf).

The actual life of a SiliconDrive is dependent on the customer usage model. SiSMART is a patented technology of WD that enables host systems to monitor actual usage of a SiliconDrive in real time. SiSMART measures and reports the remaining life of a SiliconDrive. For more information on SiSMART, refer to the *Eliminating Unscheduled Downtime by Forecasting Useable Life* white paper at [http://www.wdc.com/WDProducts/SSD/whitepapers/en/SiliconDrive\\_SiSMART.pdf](http://www.wdc.com/WDProducts/SSD/whitepapers/en/SiliconDrive_SiSMART.pdf).
